

RECKN

Keep assets native. Settle on proof.

An escrow that releases only when the work it was funded against can be re-executed and reproduced — and refunds the buyer when it cannot.

Live on Arc testnet. psyto.github.io/reckn

THE CLAIM

Nobody can move this money. Including us.

No owner, no admin, no resolver, no upgrade path. That is a **build condition**, not a promise — if one ever appears, the build fails.

**Easy to say.
So don't take our word for it.**

Four checks. Ninety seconds. Nothing installed, no wallet.

CHECK ONE

A real proof that cannot take the money.

Watch a **cryptographically valid** Groth16 proof — of a different execution — submitted against a funded deal. Then watch the deal's own proof release it, and a failed one refund the buyer.

Nobody approves any of the three.

CHECK TWO

The code holding it, verified in your browser.

Your browser fetches the deployed bytecode from Arc and compares it against this repository. Byte for byte. The escrow has no constructor, so the same source always deploys the same contract.

CHECK THREE

Real money — and work proven on another chain.

SETTLEMENTS

4

Real USDC on Arc testnet.

DECIDED BY SOLANA PROOFS

2One escrow, two virtual
machines.

COST TO DECIDE ONE

<3¢

From the receipts, not quoted.

WHAT CROSSES THE BOUNDARY

RECKN / CROSS-VM SETTLEMENT

The proof crosses. The USDC does not.

A Solana computation is re-executed in a zkVM; Arc settles only from the verified result.

The proof crosses. **The asset never does.** No bridge. No light client. No resolver on the path that chooses the payout.

CHECK FOUR — THE ONE NOBODY ELSE SHOWS YOU

What it does **not** prove.

Not	"Bridges are unnecessary."	It removes the bridge as the decider . Moving funds to where you pay remains your problem.
Not	"Fragmented liquidity is solved."	You must already hold the settlement asset on the chain you pay from.
Not	"We prove Solana mainnet state."	A bank hash recomputed over the account set the deal named . Consistency, not provenance.

This is on the live page too. A judge who leaves without it cannot tell us from an oracle.

CHECK IT YOURSELF
